

Audio and Video Final Project

You are going to create a website that shows your ability to include audio and video in a web page. The site can be a single page or multiple pages. You must create a video in class to put on your site. The site will have music, and it will be promoting the web design class. Make sure the site is fun and encourages people to want to join the web design class.

The web site must include these components:

1. *Linked Video or Embedded Video*
2. *Embedded Audio or Linked Audio*
3. *Optional: Embedded Animation*
4. *Optional: Embedded Video in a .SWF container with user playback controls*
5. *Information About Web Design*
6. *Fun activities completed in Web Design*
7. *Days class is offered*

Overview

Your website must show examples of each of these skills. These examples could all be on one page, or you could make separate pages for each. Be creative and try to make a site that shows off your web design skills as well as your audio and video skills. You cannot violate copyright law to create this project. If you want to use multimedia files that are not your own then try the online resources below to find files that are legal for you to use.
